## SUMMARY

Applied software engineering graduate (D4, Universitas Gadjah Mada, GPA 3.75) who turns manual, paper-based operational workflows into digital systems that non-technical teams actually adopt — in higher education, financial consulting, and oil & gas inspection. Skilled in requirement gathering, business process mapping, end-user enablement, and leading delivery teams of up to 12. IBM Product Management certified; completing SAP consulting and supply chain credentials.

## EDUCATION

### Universitas Gadjah Mada

*Bachelor of Applied Science (D4), Software Engineering Technology*

Yogyakarta, Indonesia

Expected Oct 2026

- GPA: 3.75 / 4.00
- Thesis: web-based decision support system for early identification of student psychological risk, built on a rule-based engine; extends the APPIKS platform with three additional capabilities, including a psychologist role.

## EXPERIENCE

### PT Novaren Teknologi Indonesia | Software House

Jakarta, Indonesia

*Founder*

Nov 2025 – Oct 2026

- Built the operating foundation of a 7-person cross-functional company from zero: org structure, SOPs, and an OKR framework.
- Directed continued R&D and go-to-market for the APPIKS platform, including school pilot negotiations and implementation pitches to government bodies.

### PT Adiwarna Pratama | Oil & Gas Inspection and Manpower Services

Jakarta, Indonesia

*IT Developer — recurring engagements (independent internship & freelance)*

Jul 2024 – Jan 2026

- Returned across six separate engagements over 18 months as the company's sole external IT resource, covering system development, data backup, and workstation provisioning.
- Built the company's internal operations web system on Laravel and React, digitizing nine document workflows — including work order, delivery note, purchase requisition, and material receiving — on a three-table master data layer, now used daily by the QHSE and head-office operational team.
- Gathered requirements directly from the QHSE and operational team, then handled deployment, data migration, and workstation setup for management users.
- Identified user readiness, not software, as the blocker for warehouse digitization; built an interim Excel-based workflow and coached warehouse staff with no prior PC experience as a transition step toward a full logistics module.

### APPIKS | Doctoral Research Project, Universitas Negeri Yogyakarta

Yogyakarta, Indonesia

*Product Owner (Freelance)*

Aug 2025 – Nov 2025

- Translated a doctoral research model into a product backlog and delivery roadmap covering 6 user roles and 30+ features, with scoped data access designed so counselors and homeroom teachers see only their own students.
- Led a 4-person cross-functional team and delivered the full platform in 2.5 months.
- Ran field validation with 120 users across 6 high schools, scoring 4.1–4.3 / 5.0; facilitated end-to-end intellectual property registration.

### PT Tata Data Global | Accounting and Financial Consulting

Jakarta, Indonesia

*Project Manager (Freelance)*

Jan 2025 – Jul 2025

- Delivered 12 modules of an accounting system in 5 months with a 7-person fully remote team, translating consultants' accounting workflows into technical requirements.
- Designed a journal tracking module that replaced a 7-step manual lookup, repeated once per transaction, with a single query returning every transaction in an account at once.

### Ditjen Pendidikan Tinggi, Kemendikbudristek

Jakarta, Indonesia

*Product Manager (Intern)*

Sep 2024 – Dec 2024

- Led a 12-person cross-functional squad (developers, QA, UI/UX, database engineers) split across two squads, running two national-scale products in parallel as the sole product manager: SISTER-CAT, a computer-based certification testing platform for lecturers, and the BKD national lecturer workload dashboard.
- Managed a backlog of ~400 items across 11 sprints, including 316 tasks in 25 epics on the BKD board; wrote user stories with acceptance criteria and definition of done, ran daily stand-ups and sprint planning, and reported directly to ministry stakeholders.

## CERTIFICATIONS

- IBM Product Manager Professional Certificate, July 2026
- IBM Generative AI for Product Managers, September 2026
- In progress: Rutgers Supply Chain Management Specialization (Oct 2026); SAP Technology Consultant Professional Certificate (Dec 2026)

## LEADERSHIP

### KKN-PPM UGM Bangka Bandhawa

Bangka Belitung, Indonesia

*Sub-unit Coordinator & Head of Media*

Oct 2024 – Aug 2025

- Co-initiated a new community service site in Batu Beriga Village as part of the core proposing team, securing full private sponsorship.
- Managed a 5-person operational sub-unit (village stakeholder relations, budget, program execution) and a 6-person media division; completed 100% of planned programs.

## SKILLS

- Business analysis: requirement gathering, as-is / to-be process mapping, user stories and acceptance criteria, backlog prioritization, UAT, end-user training
- Delivery: Agile / Scrum, sprint planning, Jira; Excel — assistant instructor, Excel workshop at FKMKM UGM
- Technical: PHP, Laravel, React, MySQL, REST APIs
- Languages: Indonesian (native), English (intermediate)
